Standardize, Simplify &
Shorten Treatment with
Predictable Results

Class II

Class III

Specialist Division

SAGITTAL FIRST™

The SAGITTAL FIRST Philosophy is a ground-breaking approach that standardizes, simplifies, and shortens Class II and Class III treatment. It employs the Carriere® Motion 3D™ Appliance to treat the AP dimension at the beginning of treatment before placing brackets or aligners. By resolving the most difficult part of treatment first, you can achieve a Class I platform in 3 to 6 months, shortening total treatment time by a minimum of 6 months.¹ You know how excited patients and parents get when you mention shorter treatment times!

“The MOTION 3D has changed the way that we practice orthodontics. By implementing Sagittal First protocols with the MOTION 3D Appliance, bite correction is addressed more elegantly and with improved treatment efficiencies. We are seeing fewer complications and treatment times decreased by as much as 50%.”

– Dr. Jep Paschal

¹ “Treatment Effects of the Carriere Distalizer (Motion 3D) Using Lingual Arch and Full Fixed Appliances,” Journal of the World Federation of Orthodontists, May 2014.

The Ultimate Success Formula

SAGITTAL FIRST: Standardizes and Simplifies Treatment

- Utilizes same treatment protocol no matter the malocclusion type
- Simplifies treatment and planning
- Eliminates lab time delays with direct-bond placement

SAGITTAL FIRST: Shortens Overall Treatment by up to 6 Months

- Eliminates competing forces associated with AP correction while wearing fixed appliances
- Fosters greater patient compliance at the start of treatment, when patient motivation is highest
- Establishes a Class I platform in 3 to 6 months, faster than any other appliance on the market today ²

SAGITTAL FIRST: Increases Conversion Rates with Same-Day Starts

- Motion 3D can be bonded immediately after the consult
- Takes under 15 minutes to place and educate the patient
- Minimize extractions to help build your practice

SAGITTAL FIRST: Offers More Treatment Options for Patients

- Motion 3D provides simple bite correction for clear aligner treatment
- Offers opportunity to postpone decision about whether to finish with brackets or aligners based on compliance, hygiene, and treatment progress

Treatment Workflow Comparison

A Closer Look

Motion 3D Class II Appliance

○ CLASS II

Motion 3D CLEAR Class II Appliance

○ CLEAR CLASS II

The Motion 3D Class II Appliance uses a unique ball and socket design that mimics the human body's mechanics to provide natural but controlled forces during treatment.

□ Available in fun and bold colors!

Indications:

- Class 1, Crowding
- Class II, Division 1
- Class II, Division 2
- Class II, Open bite
- Class II, Deep bite
- Class II, Blocked out upper cuspids
- Class II, Subdivision, left or right (unilateral)
- Mixed Dentition (Phase 1)

Sleek hook on pad
for attachment of Carriere
Force1 & Force 2 Elastics

Fixed cuspid pad
allows the distal
movement of the cuspid
along the alveolar ridge
without tipping

How the CLASS II Appliance Works

The Motion 3D Class II Appliance is used to employ the SAGITTAL FIRST Philosophy to achieve an ideal Class I platform at the beginning of treatment prior to placing brackets or aligners when there are no completing forces operating and patient compliance is at its highest.

Setup:

- Appliance is bonded from the upper first molar to the cuspid or bicuspid
- Bondable hook or molar tube is bonded to the lower first or second molar
- Elastics connect the appliance to the bondable hook or molar tube
- Essix-type retainer, clear aligner, or lingual arch provides anchorage for mandibular arch

Using gentle, uniform forces, the *Motion 3D* Appliance achieves ideal Class I occlusion by simultaneously:

1. Rotating the maxillary first molars around the palatal root
2. Uprighting the maxillary first molars
3. Distalizing the maxillary posterior segment – from canine or first premolar to first molar, as a unit

Before Motion 3D

After Motion 3D

Before Motion 3D

After Motion 3D

Results from *Motion 3D* :

1. Upper first molars rotate into correct position
2. AP corrected – Class I molar and cuspid relationships achieved
3. Anterior crowding resolved (with extra space!)
4. Overjet and overbite deep bite corrected
5. Movement averages from 3 mm to 6 mm

Motion 3D + RAPID Clear Aligners A Complete System

Let Motion 3D do the heavy lifting for you!

The SAGITTAL FIRST Philosophy utilizing the Motion 3D CLEAR™ Appliance is designed to simplify and standardize your aligner cases, reducing total treatment time and both the number of attachments and aligners required.

Up to
66%
FEWER
Aligners with
MOTION 3D!

By correcting the sagittal first with MOTION 3D, I've reduced my number of aligners by an average of 62%! I've improved facial aesthetics, airway and TMJ when needed - in a way that I am not able to do with aligners alone."

— Dr. Luis Carrière

Motion 3D Class III Appliance

Treat Class III Malocclusions using the SAGITTAL FIRST Philosophy

The Motion 3D Class III Appliance is a minimally invasive appliance intended to treat Class III malocclusions without extractions, painful orthognathic surgery or uncomfortable and obtrusive face masks. The Motion 3D Class III Appliance is as easy to place as a bracket or buccal tube, and is designed to provide predictable results, preserving the patient's natural features while creating a harmonious, balanced profile.

Similar to its Class II counterpart, the patient-friendly Motion 3D Class III Appliance is used at the beginning of treatment, prior to braces or aligners, to deliver rapid AP correction. By following the SAGITTAL FIRST Philosophy powered by the Motion 3D Class III Appliance, overall treatment time is reduced by several months.

Simple, reliable, direct-bond attachment points

Universal left and right design for simple inventory management

Sleek hook on pad for attachment of Carriere Force 1 Elastics

Patented posterior pad with special dovetailed grooves for excellent bond strength and retention

Multi-lateral flexion at the center and distal segments, allowing a custom anatomical fit and gentle repositioning/uprighting of the molar

High flexibility and unique spring-back qualities to resist deformation

Patented anterior pad with special dovetailed grooves for excellent bond strength and retention

Indications:

- Class I, Crowding
- Class III, Deep Bite
- Class III, Open Bite
- Class III, Unilateral
- Class III, Cleft Palate
- Mixed Dentition (Phase 1)
- As an alternative to surgery

Carriere Motion 3D Sidekick Bondable Hook

Engineered to partner seamlessly with Motion 3D Appliances, the Motion 3D Sidekick™ Bondable Hook further simplifies the SAGITTAL FIRST Philosophy. The Sidekick Hook bonds to the first or second molar with its hook orientated along the same vector as the hook of the Motion 3D Appliance when the patient's mouth is closed. This placement facilitates easy engagement and superior performance of the Force 1 and Force 2 intraoral elastics.

Item Number: 430-003, 10/pack

Increased surface area using pylon geometry on bonding base (similar to Aria™ Brackets) for proven superior bond strength

Micro-etched base for enhanced bond strength

One-piece MIM manufacturing process for exceptional strength

Pull extraction access eyelet for versatility during orthodontic treatment

Adhesive Guard Rails for easier flash clean up

Chamfered edges for easy debonding from any angle

Ideal hook shape for easy double Force 2 elastics attachment, if needed

Smooth contours for enhanced patient comfort

Low profile for enhanced patient comfort
